

**TuWay
Communications™**

Always make it work.™

Network Security Services

Did you know that TuWay Communications also provides network security services?

For years, TuWay has developed a reputation as a premier provider of radio, microwave, wireless video surveillance, and communications dispatch solutions and services. Now, in partnership with Computer Technologies, LLC we also offer 24x7 monitoring of your network and systems against security threats and hacks.

ANALYZE

We assess in-place information systems and procedures, gathering the information necessary to analyze the network and systems for both functional and security deficiencies. This process yields an in-depth understanding of strengths and weaknesses and provides a clear path to a secure and highly available system. We then work with your management team to develop a security program optimized for your needs.

MAINTAIN

Lack of timely application of software updates and security patches, combined with poor user “maintenance” (e.g. periodic password resets, deletion of employees who have left) are some of the leading causes of security breaches. We utilize a combination of both automated and manual updates, patch deployment and user maintenance tailored to your unique needs.

SECURE

A mesh of small, lightweight software “agents” are deployed throughout the network which perpetually monitor system and device access, maintenance health, and proper function. These agents provide constant information allowing us react proactively to any network security issues.

At the edges of your system, we deploy advanced application security devices which analyze all traffic in and out of your organization in real-time, comparing it against an up-to-the-minute database of known threats of all types. These systems report to both our customer and our network security specialists any suspicious activity, from without or within, to which we immediately respond.

SUPPORT

Our security agreements provide protection and peace of mind for a fixed monthly cost. Our security monitoring systems are constantly reviewed and updated to adapt to the ever-changing threat landscape. In addition to the constant threat database updates and automated patch deployments, we conduct in-person quarterly review meetings to discuss emerging vulnerabilities and recommended changes to your network defense. Additionally, should you experience any issues, you can open a support ticket right from client workstations via our agent application, via e-mail, or by calling our service department directly. All 24x7, 365 days a year.

THE TUWAY DIFFERENCE

Now in our sixth decade in business, TuWay Communications supports both critical wired and wireless voice and data networks for police, fire and EMS agencies, as well as businesses throughout the region. While there are many vendors who have experience maintaining wired networks, few can also match TuWay’s wireless capabilities. With the increased use of wireless technologies in all facets of the workplace, TuWay is uniquely positioned to provide predictability and reliability to all of your networked assets. This unique combination of experience means you can rely on TuWay Communications to *Always Make it Work.™*
